NETWORK SECURITY DATA MANAGEMENT SYSTEM AND METHOD

ABSTRACT OF THE DISCLOSURE

A system for compiling security data from an information network includes at least two network components (30,34), each providing data. A data parser (48,52) is coupled to the network components (30,34). The data parser (48,52) has access to two parser scripts that correspond to the 5 network components' data. Categorized data can be produced by applying the parser scripts to the data received from the network components (30,34).
